MAXCapture COVID-19 Monitoring

As schools design strategies to reopen after COVID-19 closures, school nurses will be critically important to the re-opening process. It is expected that nurses will lead efforts to coordinate the screening protocols for students as well as staff. Additionally, return to school policies and procedures must be implemented for those diagnosed or presumed ill with COVID-19 to provide safety and prevent spread. These responsibilities, along with an increase in reporting, require tested and trusted tools that efficiently manage this data. The MAXCapture COVID-19 Monitoring System provides comprehensive support including:

MAXCapture COVID-19 System Highlights

- Ease of navigation for Temperature & Symptom Monitoring
- Flagging and identify clusters
- Quickly document temperature & symptoms of students and staff
- Single Entry for daily mass screenings (by class, grade)

Sivic Solutions Group (SSG) continuously monitors the changing needs of school districts and the impact COVID-19 will have on schools and their healthcare. MAXCapture, designed and created with the insight of school health professionals, offers the flexibility to adapt to changing needs immediately.

For example, SSG quickly implemented the telehealth changes required due to COVID-19 for compliant documentation in our system. Additionally, a system change was promptly made when the State of Kentucky adapted the *Free Care Act* for school districts in 2019.

Hundreds of school districts use MAXCapture. Speak with a SSG consultant today for more information!
